iGadge Junior

INSERT GADGETS MACHINE

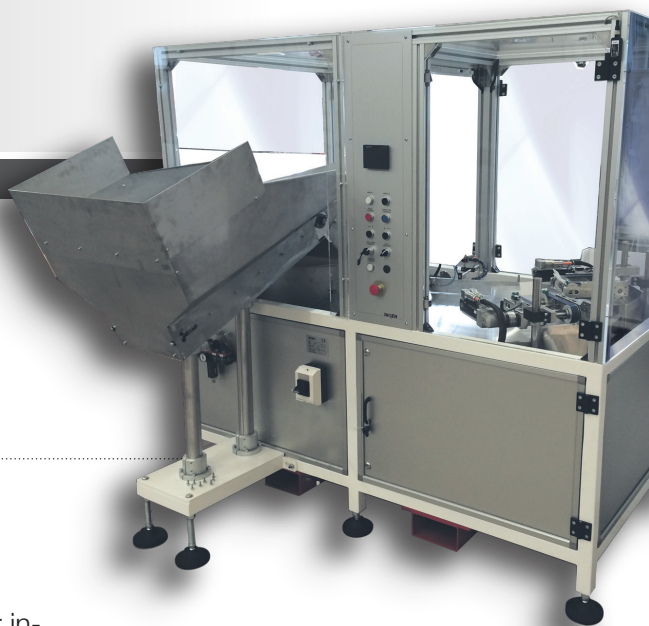

MAIN FEATURES

- Size (HxWxD): 1855x2995x1200 cm
- Weight: ≈1000 kg
- Performance: 120 bpm
- Efficiency: >97%
- Range: 20'
- Absence of gadgets: <0,5%
- Double gadgets: <3%

iGadge Junior is the compact version of our insert gadgets machine. Smaller and simpler, it is the right solution to add cutleries, spoons, sugar sachets, cards or every other gadget in the main packages of your product, with the efficiency and precision as usual.

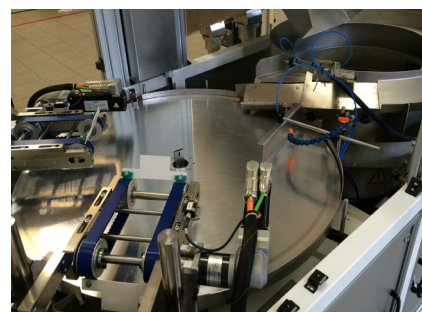

The system is composed of an hopper that supplies the gadgets in a bowl of a vibrating feeder. Then the articles are distributed on a rotating table where two small belts with specific shovels (activated by a brushless engine) select one gadget at a time, laying it down in an appropriate hopper. Each article will be dropped in a pocket of an underlying conveyor belt. Lastly, the gadget will be inserted directly in the Vertical Form Fill and Seal machine, after the metal detector.

iGadge Junior guarantees a constant gadgets supply, providing at least one article in each main package.

The machine can be customized and integrated with every packaging system. It can be provided in right or left version, depending on the plant.

Simplicity, reliability and low maintenance: **iGadge Junior** is suitable for any application, ensuring not only a better manufacturing process but also offering a more complete output.
